Technologies

Languages: JavaScript | Ruby | C++ | Golang | Java | SQL | HTML5 | CSS3

Libraries & Frameworks: Ruby on Rails | Express | ReactJS | NodeJS | Backbone | JQuery | Tailwind

Tools & Methodologies: Redux | PostgreSQL | MySQL | SQLite | MongoDB / Atlas | Git Workflow | JSON | AJAX | JSX | Heroku

Projects

B.I.O.M.E. (Beverage Inventory & Order Management Environment) Github Frontend | Github Backend | Demo

 A single.page application for organizing and ordering product from the perspective of a beverage manager

• Utilized JSON Web Tokens. session cookies end local storage to store encrypted user information end retrieve it when needed

• Configured Redux stores and recrucers Wittlin React to store and manage all state-ty data to circumvent prop drilling complications

• Created a manifest system for updating many Items on the backend with just one call to my built from scratch REST-ful API

• Employed React Bootstrap Modals to keep the application to a single page in order to maintain a lightweight appearance

UOweMe - Github Frontend | Demo

 The expense tracking app for petty people

• Collaborated with a fellow programmer to make a practical planning app for beth comedic relief and usefulness

• Utilized React Router to allow for smoother navigation and eas..er Integration with REST-ful routing

• Leveraged JS0N Server to provide a simplified API for CRUD functionality ahead of diving deep into other backend technologies

• Deployed the entire application using Heroku for the backend JSON server and Netlify & the React frontend

Deckswap - Github Frontend | Github Backend | Demo

  An application geared towards Magic; the Gathering enthusiasts, allowing users to rent preconstructed decks

• Incorporated raw Ruby code to make backend architecture straightforward, clean and expressive

• Implemented many tools available In the vast toolbett of React to create a dynamic user experience

• Worked with multiple asynchronous functions to make a series of calls from the frontend to backend

• Utilized external API calls from established websites (with permission via API keys), enhancing user experience
